

I am	Describe customer with 3-4 key characteristics who are they?	A farmer, agricultural researcher, or agronomist who relies on data-driven insights to improve crop yields and optimize farming practices.
I'm trying to	List their outcome or "job" the care about- what are they trying to achieve?	Accurately predict the growth stages of plants using environmental factors (e.g., temperature, humidity, soil moisture) and management data (e.g., irrigation, fertilization) to improve decision-making.
but	Describes what problems or barriers stand in the way- what bothers them most?	I struggle with manually analyzing complex datasets, integrating various data sources, and visualizing trends effectively.
because	Enter the "root cause" of why the problem or barrier exists- what needs to be solved?	Traditional methods of monitoring plant growth are time-consuming, error-prone, and lack predictive analytics, making it difficult to optimize farming operations.
which makes me feel	Describe the emotions from the customer's point of view – how does it impact them	Frustrated due to inefficiencies, uncertain about crop performance, and concerned about potential losses due to poor decision-making.
